                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents human STCP-1. STCP-1 polypeptides demonstrate chemokine activity for T-cells. The polypeptides are useful prophylactically or therapeutically to treat HTV infection and other conditions associated with viral/bacterial pathogens infecting T-cells, macrophages or other immune system cells. They can be included (optionally chemically modified) with a pharmaceutically acceptable carrier and optionally other pharmaceuticals (e.g. AZT, antibiotics etc.) in therapeutic compositions for treating these conditions. STCP-1 also useful to assay for inhibitory compounds used to reduce circulatory system STCP-1 levels to alleviate e.g. joint inflammation associated with rheumatoid arthritis, lupus or other autoimmune diseases. The pulpeptides are also useful to prepare antibodies or hybridomas. The nucleic acids are useful to prepare antibodies or hybridomas. The stCP-1 DNA/RNA in mammalian samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9

                                                                                                                                                                                                                                                                                                         This sequence represents the macrophage-derived chemokine (MDC). This protein is used to produce the antibodies of the invention. The antibodies are useful for purifying MDC polypeptides, for detecting endogenous MDC in a host, and for modulating binding of MDC to its receptors. The DNA encoding this sequence can be used for identifying and isolating non-human MDC homologues. The MDC protein is potentially useful for treating inflammatory disorders, cancer, etc. Antagonists of MDC can be used for treating crohn's disease, arthritis, atherosclerosis etc.

The present sequence is macrophage-derived chemokine. This belongs to the CC class of chemokines. The efficacy of a vaccine is enhanced by combining it with one or more chemokines to enhance the immune response to an antigen. This can be humoral or cell-mediated immune response. The purified chemokines, fragments, derivatives or analogues are administered either concurrently with one or more purified antigens against which an immune response is desired or within a time period either before or after antigen administration. The chemokine gene is isolated by PCR, and administered by constructing an expression plasmid vector which can be expressed in a coordinated manner upon introduction in a suitable cell. The vaccines are immunostimulatory and can be used to treat microbial diseases especially HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Macrophage derived chemokine; MDC; chemotaxis; chemotactic cytokine; inflammation; immune response; inflammatory disorder; Crohn's disease; atherosclerosis; arthritis; pulmonary fibrosis.

The present sequence represents a novel human C-C chemokine, designated macrophage derived chemokine (MDC) that binds to the casignated macrophage derived chemokine receptor. The invention provides vertebrate MDC polypeptides (see also AAVC0886, AAVC0887) and AAVC0880) and isolated polypuclectides encoding them, vectors and host cells, and methods of for the recombinant or synthetic production of MDC. Also provided are MDC analogues, antibodies and antagonists. The MDC antagonists are used for the preparation of medicaments for the suppression of the proliferation of a mammalian immunodeficiency virus, for inhibiting platelet aggregation in a mammal, for the treatment or pallation of lupus erythematosus in a mammal, for inhibiting MDC-induced activation, chemotaxis or proliferation of calls that express CCR4; for inhibiting or pallating an allergic reaction in a mammal, and for treating asthma (all claimed). MDC polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                              The present invention describes macrophage derived chemokine (MDC) analogues which are capable of inhibiting MDC induced chemotaxis. Therefore, the MDC analogues may be used to modulate inflammatory and immune responses allowing for the treatment of disorders associated with excessive inflammation or overactive immune responses. Inflammatory disorders which may be treated in this way include Crohn's disease (manifested by chronic inflammation of the bowel), atherosclerosis, arthritis and pulmonary fibrosis. The present sequence represents human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ÷
                                                                                                                                                                                                                                                                  This represents a human macrophage derived chemokine (MDC). The invention provides a novel method of treating or preventing lentivirus (LV) infection or replication in a human subject, that comprises administering to the subject a composition comprising MDC or a derivative of MDC, or a nucleic acid encoding MDC or a derivative of MDC. The products can be used for treating or preventing LV infection or replication, particularly HIV infection or replication. The products can also be used for the prognosis for a LV infection, particularly an HIV infection and the MDC as a prognostic indicator. The methods can also be used with other LVs, e.g. simian immunodeficiency virus, feline.

The specification describes a method of modulating the trafficking of systemic memory T cells in a mammalian host. The method comprises administering a CCR4 modulating agent. It has been found that systemic administering a CCR4 modulating agent. It has been found that systemic Tells such as express high levels of CCR4. Ligands of CCR4 such as TARC (thymus and activation-regulated chemokine) and MDC (monokine derived chemokine) act as an adhesion trigger and, upon CCR4 binding, these cells undergo integrin dependent arrest to the appropriate vascular receptors. This arrest acts to localize the cells at the target site. The method modulates this triggering and CCR4 mediated co-chemotaxis to affect the localization of T cells in targeted tissues. The active agent may be a CCR4 agonist that acts to enhance T cell localization. Alternatively, it may be an antagonist that blocks CCR4 incoming train activity. A CCR4 angonist may be administered for the treatment of inflammation. The present sequence represents a human MDC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25..93

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                              chemokine (MDC) of the invention. Chemokines comprise a family of small secreted proteins which attract and activate leukocytes, thereby aiding in the stimulation and regulation of the immune system. C.C cytokines are subfamily known to activate monocytes, causing calcium flux and chemotaxis. The invention comprises a novel human MDC protein and nuclaic of the invention is useful in medical immaging (e.g. for immaging sites of infection, inflammation, and other sites having C.C chemokine receptor molecules. Inhibition of MDC is believed to be useful in treating diseases involving macrophages (e.g. Crohn's disease, rheumatched arthritis or atherosclerosis). Alternatively, augmenting the effects of MDC is believed to be beneficial to patients receiving the or was more than the content of the molists may be beneficial to patients receiving chemotherapy or radiation therapy and in the treatment of tumours.

treating patients lacking chemokines. Ck beta-13 is useful for treating patients lacking chemokine beta-13 by gane therapy. Ck-beta-13 stimulates the invasion and activation of host defence cells making it useful for treating solid tumours, e.g. Kaposi's sarcoma, and for useful for treating solid tumours, e.g. Kaposi's sarcoma, and for enhancing resistance to acute and chronic infections, e.g. mycobacterial infections. The chemokine induces chemotractic migration of monocytes, neutrophils, eosinophils, T lymphocytes, basophils and fibroblasts to sites where they are needed. Eosinophils may be attracted to the site of a parasitic infection to kill parasite larvae. Ck-beta-13 also recruits debris-clearing and connective tissue promoting inflammatory cells, and is therefore used to stimulate wound healing, prevent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          scarring and treat liver cirrhosis, osteoarthritis and pulmonary fibrosis. Ck-beta-13 may also be used for treating leukaemia. T-cell mediated autoimmune diseases, psoriasis, to regulate haematopoiesis and to inhibit angiogenesis. Ck-beta-13 antagonists inhibit activity of the chemokine which is useful for treating certain autoimmune diseases, atherosclerosis, chronic inflammatory and infective diseases, allergic reactions, rheumatoid arthritis, silicosis and bone marrow failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chemokine beta-13; human; CKbeta-13; immune system-related disorder; tumour; cancer; interstitial lung disease; leukaemia; lymphoma; sepsis; autoimmune disease; bone marrow stem cell colony formation inhibitor;

interstitution. The polypeptide and nucleic parals (Cobetaris) of the channes in the mannes of the channes of disorders include tumours, cancers, interstitial lung disease and disorders include tumours, cancers, interstitial lung disease and disorders include tumours, cancers, interstitial lung disease and disorders included the cartain tissues in mammals with cancer of the immune system express enhanced/decreased levels of Cobeta-13 and mRNA encoding Cobeta-13, and diagnosis can be achieved by assaying Cobeta-13 and mRNA encoding Cobeta-13, and diagnosis can be achieved by assaying Cobeta-13 and mRNA encoding Cobeta-13, and diagnosis can be achieved by assaying Cobeta-13 and mRNA encoding cobeta-13, and diagnosis can be administered therapeutically in pharmaceutical compositions e.g. to treat immune system-related disorders as above, treat sepsis, inhibit bone marrow stem cell colony formation during cancer therapy, regulate haematopoiesis, stimulate wound healing care compositions compositions the polymorleotides may also be administered, especially to express Cobeta-13 polypeptide in hosts to treat dysfunctions associated with aberrant endogenous Cobeta-13 cativity. The polymorleotides are also useful for mapping of chromosomes/chromosome sites. The polypeptides are useful to screen for agonists and antagonists of Cooperationally e.g. as antagonists to treat and a service of the cooperation of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human chemokine beta-13 polypeptide - useful in diagnosis and treatment of immune-system related disorders e.g. cancer of the immune system, leukaemias, autoimmune diseases etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence is the human chemokine beta-13 (CKbeta-13) of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               subjects requiring CKbeta-13 reduction

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 21

```

## Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
